Abnormal Uterine Bleeding

Treatments for Uterine Polyps

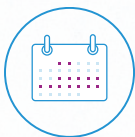

What are polyps?

Uterine polyps are composed of endometrial cells and grow on the lining of the uterine cavity. Polyps may become cancerous.

Signs and Symptoms of Polyps

- Frequent, unpredictable periods
- Irregular spotting or heavy menstrual bleeding
- Bleeding between menstrual periods
- Bleeding during or after sex
- Bleeding after menopause
- Infertility

Diagnosis

- Pelvic Exam
- Ultrasound
- Hysteroscopy
- Endometrial biopsy

Polyps can be as small as a sesame seed or larger than a golf-ball, however, symptoms are not always dependent on the size of a polyp¹.

Treatment

- Complete removal of the polyp and further testing of the tissue
- Watchful waiting for low-risk, pre-menopausal patients

Minerva Surgical offers treatments for polyps. Talk to your doctor about the right treatment for you.

Results and patient experience may vary. To learn more, including a full list of indications, contraindications, warnings and precautions, visit www.minervasurgical.com/safety/

Questions to discuss with your doctor

- Do my polyps have to be treated?
- What are the advantages and disadvantages of the treatment options?
- Where will my procedure be performed?
- What is the expected recovery time?
- How soon will I have relief from my symptoms after treatment?
- Am I a good candidate for a Symphion® or Resectr™ treatment?

When it's not just a period

It may be
